

CORETAKER® MAX model B-40500

2-PIECE MEGA SLUDGE SAMPLER WITH free CARRYING CASE

Perfect for septic and grease interceptor inspectors with limited space in their vehicle. The durable case keeps everything neat and clean.

Same Link-Release Mega Valve as the original MAX but with flexible linkage from the valve to the top. Easy to clean.

Standard lengths of 8ft (2.4m) and 5ft (1.5m). Custom lengths available.

- Slip-Lock Coupler – non-threaded
- Large 1.5” dia. polycarb. tube
- Huge Link-Release Mega Valve
- O-rings for leak free performance
- Purge sample by pulling up linkage
- Pre-numbered depth markers
- Carrying case included

New with this 2-piece MAX model is the flexible linkage between the Mega Valve and the top of the unit.

Simply slide the bottom tube into the Slip Lock Coupler and tighten the set screw.

The flexible linkage opens and closes the valve, but also provides an excellent site reference for the height of the sludge in the bottom.

8 ft. 2-piece B-40500-8
6 ft. 2-piece B-40500-6
